

Line Cleaning Kit Instructions

Kit Includes: 4oz Liquid Line Cleaner, Spanner Wrench, Double Headed Faucet Brush, and Pump.

Step 1: Dissolve 1/2oz of line cleaning solution into one gallon of water and fill the pump with the solution.

Step 2: Use the spanner wrench to remove the faucet, and screw the adapter on the end of the pump hose to the shank. **PLACE THE INCLUDED WASHER INSIDE ADAPTER BEFORE ATTACHING!** This will prevent leaking.

Step 3: Use a bucket on the other end of the line to collect the solution, and slowly pump the full gallon through your lines. If your lines are excessively dirty you can let it sit for 5-10 minutes.

Step 4: Fill the pump with a full gallon of water and slowly pump the water through your lines to flush out the solution. We recommend tasting the water at the end. It should have no flavor. IF it does, just run another gallon of clean water through it. That's it! You can now reattach your faucet after cleaning. Use the included brush!
